**Re: Kitchener Wastewater Treatment Plant demolition work, Project #T2022-195**

The Kitchener Wastewater Treatment Plant is the largest of 13 wastewater treatment plants operated by the Region of Waterloo.

As neighbouring residents of the area, you are well aware of the ongoing upgrades and construction projects at this facility. This work is important to ensure the continued reliable operation of the plant and the protection of the environment.

**Demolition**
Demolition work is to be completed to remove equipment and tanks that are no longer needed at the plant. This work is required for the safety of those at the plant and to prepare the site for future improvements. The demolition work, at the northwest area of the site, is scheduled to begin at the end of April with completion expected by December 2023. This work is a continuation of overall plant upgrades that were identified through the Class Environmental Assessment Study that was completed in 2012.

**Project information**
The Region contracted T. Musselman Excavating Limited (TME) to complete this work, which will include:

- Removal of soil piles from the site
- Decommissioning of facilities that are no longer in use
- Partial and full demolition of six structures
- Replacement of aging watermains
- Restoration of all areas affected by the demolition activities

The contractor has started to set up equipment and prepare the site for the project.

**Working Hours**
Standard working hours for this project will be Monday to Friday from 7 a.m. to 5 p.m. Work outside of these times may periodically be required to complete the project. Our priority is to keep the work within these hours whenever possible.

**Project updates — Stay informed**
We recognize being informed about all the improvements being made at this site is important to you. We have developed a project page at www.engagewr.ca/kitchener-wastewater-treatment-plant to bring you information about this, and all projects being scheduled for the Kitchener Wastewater Treatment Plant.

The project page will have updates for ongoing work, provide information about upcoming work, inform the community of engagement opportunities, and provide links to important documents. Everyone is welcome to subscribe to the project page to receive emails from us when we have information to share. This project page is the best way to stay informed. Contact information will also be available.

**Thanks for your patience**
We understand this work may cause disruptions to the neighbouring residents. Efforts will be made to minimize disruptions where possible, while still ensuring the work can be completed efficiently and cost effectively. We thank you in advance for your patience and cooperation.

Thank you,

Padraig Keating P.Eng PMP
