Public Consultation Centre #2 Summary

Bleams Road Intersection Improvements, from just west of Fischer-Hallman Road to Trussler Road, City of Kitchener

The purpose of Public Consultation Centre #2 (PCC#2) was to:

- present the project team's preferred alternative design that meets the improvement needs of Bleams Road.
- Receive comments on the preferred solution.

The preferred design accommodates the needs of Bleams Road, while taking into account comments from the public and stakeholders, along with consideration of other technical studies, best practices, and the experience of those on the project team.

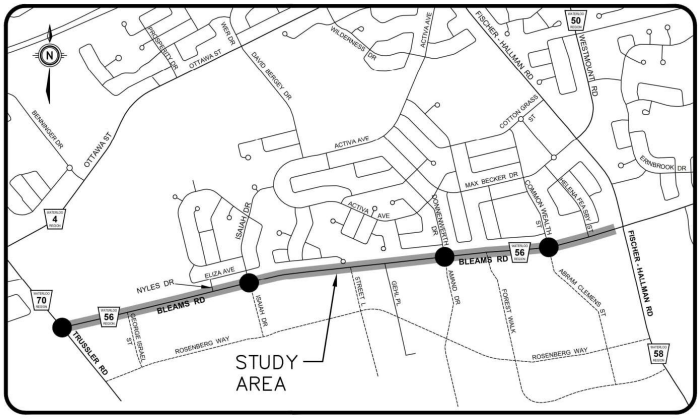

Figure 1 - Key Plan

During PCC #2, which ran from August 15 to September 12, 2022, there were 93 visitors, of which, 10 people responded to the survey questions and one visitor offered insights and suggestions relating to vehicle speeds at roundabouts. All of the responses received were in favour of the all-roundabout solution. However, some listed active transportation and crossings of the corridor as a concern. The project team was made aware of the above concerns and will take them into account during the detailed design of the Bleams Road improvements.
