# Open House & Public Information Centre
# Baden Sanitary Trunk Phase 2 – Microtunneling

Dear Resident/Property Owner:

The Township of Wilmot is advancing Phase 2 of the Baden Sanitary Trunk Sewer project, a critical infrastructure investment that will provide long-term sanitary servicing capacity for the Settlement of Baden and support planned growth in the community.

Phase 2 involves the installation of new trunk sanitary sewer infrastructure along Christian Street (from Snyder's Road West to Charlotta Street) and Charlotta Street, continuing south of the CN railway corridor to connect with the Phase 1 infrastructure completed in early 2025. This work is part of the preferred servicing alignment endorsed through the 2021 Baden Trunk Sanitary Sewer Environmental Assessment (EA) and approved by Council on November 10, 2022.

Construction will include installation of 900mm diameter concrete trunk sewer, as well as a specialized crossing beneath the CN railway corridor, where a 450mm sanitary pipe within a 900mm steel casing will be installed using microtunneling technology. This trenchless method has been selected due to deep excavations, limited right-of-way, and the need to minimize surface disruption while maintaining safety and protecting nearby utilities.

Additional construction considerations include detailed staging, soil and geotechnical management, coordination with utility providers, and traffic management to mitigate impacts on nearby residents and businesses.

**You are invited to attend the Open House/Public Information Centre (PIC) for this project that will be held at the Township of Wilmot Administration Office.**

The purpose of the PIC is to present the project design, outline construction staging and timelines, and provide an opportunity for residents to ask questions and share feedback.

The PIC will include:

- Overview of the Phase 2 trunk sewer alignment
- Explanation of microtunneling and construction methods
- Traffic and access considerations during construction
- Project schedule and next steps

Feedback from the PIC will help inform project communications and final preparation ahead of construction.
